Can solar panels be mounted on a wall?

So, although it is possible to mount solar panels on a wall, it's not ideal. You're also less likely to be able to mount as many solar panels on a wall as you would on a roof, which means they won't generate as much electricity as a roof-mounted system. What are the pros and cons of wall-mounted solar panels?

Are wall-mounted solar panels right for Your House?

Well, wall-mounted solar panels are ideal if your home lacks the right roof (perhaps it's too shaded, too steep or simply too small) to support a roof-mounted solar array. Or, possibly, you've already installed a solar system on your roof and want to maximise your home's clean energy-producing capacity by adding panels to your walls, too.

How do you install a solar panel on a wall?

Begin by securing the mounting frame to your pre-selected wall. Think of this as building a solid foundation for your solar energy household. Next, fix the solar panel on the mount. Like placing the final puzzle piece, this step brings your vision to life.

Which houses are best suited for vertical wall-mounted solar panels?

The houses best suited for vertical wall-mounted solar panels have a south-facing wall with unencumbered, unfiltered access to the sun all day. That means there shouldn't be any neighbouring buildings or trees close enough to cast shade on these solar panels.

Can solar panels be installed on a south-facing wall?

Wall-mounted solar panels are typically installed as modules on a south-facing wall. It's not logical to install your solar panels on a wall that isn't south-facing since wall-mounted systems already have setbacks in their energy generation due to their slope.

Are wall mounted solar panels better than roof-mounted solar panels?

Wall-mounted solar panels tend to be less efficient than roof-mounted ones and can be more complex and costly to install, but for homes with roofs that would otherwise be unable to access solar energy, the benefits easily outweigh the drawbacks.
