

How to install the pile head for photovoltaic panels

Is helical pile suitable for solar panel mounting?

Helical piles can resist compressive, tensile, and lateral forces, making them a versatile option for solar panel mounting. This eliminates the need for concrete, allowing the job to be completed in less time than traditional methods. Call today to find out what helical pile works best for your solar panel system.

What is a solar pile structure?

Solar pile structures are foundational components supporting solar panel arrays,often composed of durable materials like steel or aluminum. These vertical supports anchor the panels securely to the ground,ensuring stability and resistance against environmental factors.

How do you install solar panels in a concrete pier?

Concrete Piers: Concrete footings are poured into the ground to support the solar array. This method is commonly used for smaller-scale installations or regions with specific soil conditions. Before installing the solar panels, thorough ground preparation is essential to ensure a level and stable foundation.

What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

How do I choose a pile for a solar farm?

The load-bearing capacityneeded for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities--such as those with large, heavy solar panels or in regions with significant wind forces--may necessitate the use of concrete or composite piles.

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufactures of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.
