For our scenario, we consider the following: System size: A 2.4kW solar system of 6 x 400W solar panels. Total installation time: 2 to 3 days, including the building of the ground structure and solar frame.

How are ground-mounted solar panels installed?

Ground-mounted solar panels can be installed in two ways, either by standard installation or a pole-mount installation. The standard ground-mounted solar panel system is similar to the rooftop solar installation in that the panels are mounted on a metal frame.

Should you install solar panels on the ground?

Additionally, if you don't have the extra space, installing solar panels on the ground will leave little to no room for your lawn, flower beds, or other landscaping. If that's important to you, then rooftop panels may be a better option. Ground mounts are more common for certain types of solar systems, like off-grid setups.
