

How to measure the inclination of photovoltaic panels on site

What is the inclination angle of solar panels?

When solar panels are completely flat, the angle is 0° ; whereas the angle is 90° when panels are perfectly vertical, perpendicular to the ground. The tilt angle is the angle between solar panels and the ground. Calculating the inclination (or tilt) angle of solar panels is a vital aspect of photovoltaic design.

How to calculate solar panel orientation?

The orientation is composed of two parameters: direction and tilt angle. Select your timezone and enter your coordinates (latitude and longitude) to calculate the optimal orientation for fixed solar panels, twice adjusted solar panels, quarterly (seasonally) adjusted solar panels, and monthly adjusted solar panels.

How do I calculate the optimal tilt angle for solar panels?

Select your timezone and enter your coordinates (latitude and longitude) to calculate the optimal tilt angle for fixed solar panels, twice adjusted solar panels, quarterly (seasonally) adjusted solar panels, and monthly adjusted solar panels. You can find your coordinates from Google Search.

How do I find the best angle for my solar panels?

Simply enter your address and it will provide the optimal angles for each season, as well as a year-round average angle for your specific location. An example of the calculator results. Discover the best angle for your solar panels with our Solar Panel Tilt Angle Calculator. Maximize energy efficiency and save money!

What is a solar panel angle?

The solar panel angle, also known as inclination, refers to the vertical tilt angle between the surface of the solar panel and the ground. As the sun movement varies both geographically and seasonally, you need to adjust solar panel angles specific to the latitude, season, and time of day to maximize the power output.

How to calculate solar panel angle based on latitude?

Here are two simple methods for calculating approximate solar panel angle according to your latitude. The optimum tilt angle is calculated by adding 15 degrees to your latitude during winter, and subtracting 15 degrees from your latitude during summer.
