

What percentage of electricity is produced in Iceland?

Today, around 73% of electricity in Iceland is produced by hydroelectricity and around 27% is from geothermal energy. Around 90% of heating for buildings in Iceland is from geothermal energy (in the form of geothermal district heating). Please also see: [Geothermal District Heating in Iceland](#)

What natural resources does Iceland have?

Iceland is home to glaciers, glacial rivers, hot springs, geysers, volcanoes (mostly dormant, and some active), and underwater volcanoes. This region of the mid-Atlantic ridge has frequent active seismic activity to this day. These natural resources become sources of geothermal and hydroelectric energy for the country.

How do Icelandic volcanoes produce hot water?

Icelandic volcanoes produce magma, which heats rocks, other subterranean formations, and underground aquifers. This hot water from underground aquifers is then released through hot springs, geysers, steam vents, underwater hydrothermal vents, and mud pots.
