

PXiSE provides next-generation grid control software that unlocks the potential of distributed generation to improve grid reliability and increase renewable energy output, while helping ensure system balance and power quality.

This white paper describes the challenges utilities face in moving toward a grid with high renewable energy penetration. New grid demands are leading to suboptimal, patchwork solutions; Renewable energy capacity is rising everywhere; Solar saturation is forcing a ...

PXiSE's Active Control Technology (ACT) is an automated grid control software platform that consists of hybrid power plant controls, microgrid controls, and a distributed energy resource ...

PXiSE Energy Solutions enables utilities, campuses, and communities to hit their clean energy goals by giving grid operators control of unlimited renewables and distributed energy resources while providing safe and reliable power.

Yokogawa Electric Corporation (TOKYO: 6841) announces it has acquired all of the outstanding shares of PXiSE Energy Solutions LLC., a San Diego-based developer of software that enables utilities and other grid operators to deliver reliable and stable power by managing renewables and distributed energy resources (DERs) in real time.

This white paper describes the challenges utilities face in moving toward a grid with high renewable energy penetration. New grid demands are leading to suboptimal, patchwork solutions; Renewable energy capacity is rising ...

PXiSE Energy Solutions deployed the Renewable Power Plant Control technology to autonomously operate two battery energy storage systems, one 440 kW/224 kWh system and one 770 kW/776 kWh system, to store power generated from the solar panels and wind turbine and provide energy shifting and ramp control.
