

Introduction to container energy storage system solution

What is a containerized energy storage system?

A Containerized Energy-Storage System, or CESS, is an innovative energy storage solution packaged within a modular, transportable container. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as from the grid during low-demand periods.

What is a containerized maritime energy storage solution?

ABB's containerized maritime energy storage solution is a complete, fireproof self-contained battery solution for a large-scale marine energy storage.

How do container units work?

Each container unit is a self-contained energy storage system, but they can be combined to increase capacity. This means that as your energy demands grow, you can incrementally expand your CESS by adding more container units, offering a scalable solution that grows with your needs. Providing Mobility
