Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you? Well, that depends on some key factors.

Should you buy a home with rooftop solar?

When buying a house with rooftop solar panels, systems that were paid for outright and owned by the current homeowner are the easiest to deal with and the most cost-effective. Here is what to know in each scenario for buying a house with existing solar panels.

Is it beneficial to buy a house with solar panels?

Buying a house with solar panels can be a good idea, as they can increase the value of a property and lead to low or no electricity bills. However, it depends on who owns the panels and how they're financed. Solar panels are more common than ever, but many home buyers are still considering this factor.

Are solar panels considered part of a home?

Once installed, solar panels are considered a part of the home. Solar panel installers will not remove a system that is not paid off. In California and Florida, solar panels may be financed using a property-assessed clean energy loan, or PACE loan for short.

Are solar panels a good investment?

Buying a house with solar panels already installed can be a good investment if the solar panels were paid for with cash. However, if the panels were loaned or leased, it may make it harder to sell the home. Homeowners who originally installed the solar panels often receive certain incentives, and these may not be transferable to the new owner.

Do solar panels increase the value of a home?

Solar panels increase the value of a home because of their unique features. They either provide free electricity or significantly reduced electricity bills, shielding homeowners from rising utility costs. The presence of solar panels is a desirable feature for many homebuyers. The age of the solar panels might factor into this benefit.
