

Is it okay to cut down fruit trees and plant photovoltaic panels

Do I need to cut down trees to install solar panels?

The good news is that a little shade shouldn't be a problem. You likely won't need to cut down any trees unless they create shade that covers the entire solar array. Even then, it might be more efficient to just cut a few limbs off the tree versus tearing everything down.

Is tree clearing a good idea for solar panels?

Using broad average values of 48.5 pounds of carbon sequestration per year for a mature tree, versus 0.85 pounds of emissions offset per kilowatt-hour of solar electricity, it's clear that some tree clearing is acceptable from an emissions standpoint. From pv magazine USA Is it okay to cut down a tree in order to install solar panels?

How many trees can a solar panel offset?

A single solar panel offsets a carbon emissions equivalent exceeding that of ten mature trees. The average residential solar installation, roughly 7,000 watts, offsets the emissions equivalent of more than 180 trees. A single acre of solar panels with a capacity of 250,000 watts can be expected to offset more carbon emissions than 6,500 trees.

Are solar panels worth more than a few trees?

A single acre of solar panels with a capacity of 250,000 watts can be expected to offset more carbon emissions than 6,500 trees. So if the argument were purely based on emissions, a single residential solar installation is already worth more than a few trees.

Should I trim a tree for my solar system?

That's why it sometimes comes as a surprise to our customers when we recommend that they trim a tree or two for their solar system. Unfortunately, sometimes two positive forces for the environment may run contradictory to one another. In this case, trimming your trees to open up your solar system to more direct sunshine is the clear eco-winner.

Do Solar trees save ground space?

Solar trees save ground space compared to traditional solar panels, as they are naturally quite small and thin. As a result, solar trees require less land than solar panel installations, especially considering their ability to optimise sun exposure through the placement of photovoltaic cells.
