

Is it okay to install solar power generation on the roof

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

Do you need planning permission to install solar panels on a flat roof?

Thanks to recent changes to permitted development rules, most installations on flat roofs won't need solar panel planning permission. So long as the panels aren't visible from the street and don't exceed 200mm above the roof, they should be covered under permitted development rights.

How do you install solar panels on a shingle roof?

Asphalt is perhaps the most popular roof material - as such, asphalt shingle solar panel installations are common and straightforward. Installers will drill studs into your roof and attach panel mounts at those locations.

Can solar panels be installed on my property?

In order to have solar panels installed on your property, your roof needs to be strong and secure enough to hold the weight of the panels. Prior to an installation, all certified installers should evaluate the condition of your roof to see if the roof is structurally sound.
