

Is it suitable to use solar panels to generate electricity for self-use

How do you use solar energy?

If you have a solar panel installation, there are a few ways you can take advantage of the electricity it generates: use the energy directly from your panels in real-time, pull solar credits from the grid with net metering, and draw stored solar electricity from a home battery.

Are solar panels self-consumption necessary?

While self-consumption isn't necessary for everyone with solar panels on their property, it's key to maximizing your savings without one-to-one net metering, which exists (or will exist in the future) in many places.

Can solar power be used without self-consumption?

However, without self-consumption, you'll run into problems. When you're off the grid, you can't send excess generation to the grid for net metering credits, and you definitely can't pull electricity from the grid when your solar isn't producing.

What are the benefits of self-consumption solar?

Additionally, self-consumption solar promotes efficient use of generated power, minimizing wastage and enhancing sustainability. This approach supports long-term energy savings and environmental benefits. Do we need to go off grid in order to switch on solar power? There is no need to disconnect from the grid to use the solar produced electricity.

Why should you use solar energy?

By using a renewable energy source like the sun, you reduce your carbon footprint and help combat climate change. What's more, self-consumption of solar energy makes you less dependent on the traditional electricity grid, which can be particularly useful in the event of power cuts or breakdowns.

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.
