Kodiak Island, off Alaska's south coast, is the second largest island in the United States. Its population of 15,000 people live in just seven communities, the largest in the port town of Kodiak. KEA operates a microgrid that generates virtually all of its 28 megawatts (MW) of electricity capacity from hydropower and wind.

The United Arab Emirates is no stranger to artificial island building, as mentioned above, the United Arab Emirates began building artificial islands in 2001. Although the United Arab Emirates has built its artificial islands for the purpose of commercial and residential real estate, [30] there is always the option to build artificial islands ...

In Brooklyn, LO3 Energy has teamed up with Siemens to create a pilot microgrid using blockchain technology. Residents with solar panels can sell excess energy back to their neighbours, in a peer-to-peer transaction which takes advantage of blockchain. Microgrids minimise the amount of energy lost through transmission; as an estimated 5% of electricity ...
