

Which energy sources are used in Italy?

Over a third of the electricity produced in Italy comes from green sources: hydroelectric power has always dominated, followed by solar photovoltaic, bioenergy, wind power, and geothermal. Overall, Italy is Europe's third largest producer of renewables.

How is Italy preparing for the energy transition?

We're leading Italy in its path to the energy transition. We're fielding a solid renewable capacity that we expect to boost in the coming years. A green presence throughout its territory, in order to achieve a 100% renewable, constantly growing, energy production.

How does Italy generate green energy?

Italy's generation of green energy varies substantially based mainly on the characteristics of each area and the distribution of particular renewable resources. Hydroelectric power is dominant where the terrain has steep inclines, such as the Alps and, to a lesser extent, along the spine of the Apennines.

How has Italy's energy system changed since 2010?

Italy's energy system has changed notably since 2010 and today the country's energy mix includes more natural gas and renewable energies and less coal and oil.

Does Italy have a national energy and Climate Plan?

To meet the European Union (EU)'s energy and climate greenhouse gas emissions targets by 2030, EU countries need to establish a 10-year integrated national energy and climate plan between 2021 and 2030. Italy has one in place called PNIEC.

How much energy does Italy need?

Of the over 320 terawatt-hours of Italy's annual electric energy needs, nowadays more than a third is produced from renewable sources. ENEA's latest report on energy efficiency mentions in particular 110 terawatt-hours, which are equivalent to around ten million tons of oil equivalent (toe).

Making your move to work in the energy sector, or looking for jobs in Italy? Find your next energy job in solar, wind or hydropower. WTS Energy provides staffing and training solutions to (renewable) energy companies worldwide.
