

What is Japan's Energy Policy?

Japan's energy policy is guided by the principles of energy security, economic efficiency, environmental sustainability and safety (the "three E plus S"). The 5th Strategic Energy Plan, adopted in 2018, aims to achieve a more diversified energy mix by 2030, with larger shares for renewable energy and restart of nuclear power.

What is the National Energy Plan for Japan?

NATIONAL STRATEGY The 5th Strategic Energy Plan for Japan announced in 2018 has set a target of 22-24% renewable energy in the energy mix by 2030. The Government of Japan has put in place policies and funding initiatives to promote and grow the ocean energy sector in Japan.

Is coal a good energy source in Japan?

Japan considers coal an important energy source, according to its Sixth Strategic Energy Plan released in 2021. Japan's government plans to use it as a stable and economical energy source while renewable energy is added to the power grid.

Are fossil fuels a major source of energy in Japan?

In 2019, fossil fuels accounted for 88% of total primary energy supply (TPES), the sixth highest share among IEA countries. Japan's carbon intensity of energy supply increased rapidly after 2011 and is only gradually reducing since; the carbon intensity of power generation is among the highest in IEA member countries.

What is Japan's energy supply in 2021?

Fossil fuels accounted for 72% of Japan's electricity generation in 2021, a significant decrease from 89% share it accounted for in 2012. Nuclear and non-hydro renewables, specifically solar, have been the main sources replacing fossil fuels in Japan's generation mix.

How is energy used in Japan?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Summary History Energy sources Electricity sector Hydrogen energy See also External links Japan is a major consumer of energy, ranking fifth in the world by primary energy use. Fossil fuels accounted for 88% of Japan's primary energy in 2019. Japan imports most of its energy due to scarce domestic resources. As of 2022, the country imports 97% of its oil and is the larger liquefied natural gas (LNG) importer globally.
