

How can Benin increase local production?

However, the government of Benin is making serious efforts to increase local production through national projects, specifically the Solar Energy Promotion Project (PROVES) and the Renewable Energy Development Program (PRODERE). The principal RE sources in Benin are hydro energy, biomass energy, wind energy and solar energy.

Which institutions are working to provide access to affordable energy in Benin?

Several institutional frameworks in the energy sector in Benin are working to provide access to affordable energy in the country. The ME is the biggest institution of the energy sector, responsible for the management of the energy sector and in charge of the implementation of RE projects.

What type of energy is used in Benin?

The evolution of the electrical mix of Benin indicates that, in 2020, natural gas was the first form of energy used to produce electrical energy, representing a proportion of 71.63%. Solar photovoltaic (PV) accounts for 0.30% of the mix by form of energy compared with 1.36% in 2016, as shown in Fig. 3.

Does wind energy contribute to the electrification of Benin?

Although hydroelectricity, biomass and especially PV technologies play an increasingly important role in the electrification of Benin, recent studies have shown that wind energy technologies can also contribute. Non-electrified rural and peri-urban localities have favourable wind potential in coastal Benin.

What are the future prospects for small wind turbines in Benin?

It is expected that by 2025-30, the small wind turbine sector in Benin will be a solid industry with an indispensable contribution to the electrification of the country. Table 4 summarizes the future prospects for RE in the context of Benin with some barriers to the implementation of RE projects in Benin.
