I had a couple issues and questions during install and the help at Midnite has been fantastic. They have returned calls and understood my needs well. I have a Apexium battery in the works so hopefully I can use more of the solar during non-daylight hours. On my list of things to do: 1. bury conduit for PV wires 2. build battery

Yes, very impressive when you consider the limited space in that booth for batteries. At the moment there are four small 12V AGM's in series. Once Midnite has their own LiFePO4 batteries they are developing, those will power the booth with plenty of juice to spare. The test I did was cruel and unusual punishment for those little AGM's!

The other simply makes a buzzing sound with nothing on the display when battery power is applied. I have confirmed with Midnite Support that these are failure conditions. ... of 250 volts and works with 12 to 72 volt battery systems. My favorite mod used to be Flerb's Power Outages, but it was throwing out LE's and generally misbehaving. I

tried to fix it, but ended up deciding it was easier to make my own! This is completely made from scratch, and works differently. Your Sims can experience power cuts during storms (Seasons is a required pack), that can last for hours.

Alright guys since we have one heck of a thread going on the new Midnite The One AIO I thought I would go ahead and start a separate thread for discussion and review of the upcoming Midnite Battery Systems both server rack and larger modular sizes. First question when can we expect to see...

PV DC negatives seem to be common internally. Other AIO's such as Sol-Ark etc. need to have the PV negatives 100% isolated. I'm sure Midnite would still recommend keeping negatives isolated, but it is just something I found interesting. According to the spec sheet, it appears that Midnite would not call this unit transformerless!
