

Is Kuwait a natural gas exporter or importer?

Today, Kuwait relies almost exclusively on oil products and natural gas to meet its energy needs, with each fuel accounting for about a half of total primary energy consumption. But while Kuwait is a major oil exporter, it is a net importer of liquefied natural gas, due to underdevelopment of its gas reserves.

Will Kuwait replace natural gas for oil?

Kuwait plans to substitute natural gas for oil in the power generation sector in order to retain oil-export revenues for savings and investment. Government plans also encompass increasing the share of renewable energy in the power generation mix.

Does Kuwait need a new energy strategy?

To ensure economic development and social prosperity in the years to come, Kuwait will require a new energy strategy, combined with a plan to foster economic diversification and reduce fossil fuel dependency.

Will energy demand grow in Kuwait until 2035?

Projections of energy demand in Kuwait until 2035 show that previous trends still hold, with the transportation sector remaining as one of the biggest drivers for local energy demand growth in Kuwait (growing at a rate of 3% per year).

Should Kuwait reevaluate its power generation and desalination plans?

Environmental considerations, cost reductions in renewable energy technologies and higher than expected growth in electricity and water demand could persuade Kuwait to reevaluate its current expansion plans for the power generation and desalination sectors, particularly if MED and RO technologies prove to be more efficient and reliable.

Does Kuwait need liquefied natural gas?

The country plans to increase the share of gas-fired power plants in the future, but as gas production is underdeveloped, it is currently a net importer of liquefied natural gas (LNG). Kuwait has a soft target of increasing the share of renewables in total energy demand to about 15% by 2030, up from less than 1% today.

The aim of the study was to determine the prevalence of New Delhi metallo-v lactamase-1 (NDM-1) producing Enterobacteriaceae in Kuwait over a one year period. Consecutive Enterobacteriaceae isolates with reduced susceptibility to carbapenems were collected from four government hospitals in Kuwait from January-December 2014. Their ...

Nadia Bader Alhajji, CEO of Petrochemical Industries Company (PIC), talks to The Energy Year about the fundamental role that petrochemicals play in the consecution of energy transition goals. PIC is a KPC subsidiary that manufactures and markets petrochemicals and fertilisers in Kuwait and internationally.

For Kuwait, the Energy Transition should not be a story about decarbonisation. Instead, it is built upon the principles of efficiency, profitability, & national growth. The shift is a massive endeavour targeting an energy system that supports the State's top & bottom lines: increasing oil export revenues while reducing energy imports, subsidies, & the disparities in the levelised cost of ...
