

There have been several island microgrid projects in the world. In Europe, the Kythnos Island microgrid project is built on an island located in the Aegean Sea [4], which includes 10 kW of PV, a 53 kWh battery bank, and a 5 kW diesel genset. This project aims to test the centralized and decentralized control strategies for islanding.

For example, the Kythnos microgrid was testing the Mult Agent System of communication and control between loads and DER (a.k.a. agents), and reported that it had issues with the negotiation process between these agents [30]. The Huatacondo microgrid also had challenges implementing its Social SCADA monitoring and control system [31]. Therefore ...

"Kythnos is a small island in the Aegean sea in Greece. As is typical of islands in general, Kythnos is cut off from the national grid on mainland Greece. ... island. Thus, in the framework of two European Commission projects (PV-MODE, JOR3-CT98-0244 and MORE, JOR3CT98-0215), a microgrid was installed in 2001, which has since provided ...

Kythnos is a non-interconnected Island with the following energy mix: Peak load: 2980kW; Installed capacity of fossil fuel Generation: 5920kW ... and MORE (JOR3CT98-0215), supported by the European Commission. In 2006, the Kythnos Microgrid was upgraded in the framework of the MORE MICROGRIDS project (FP6 019864), and used as a test field for ...

Kythnos Microgrid contains two subsystems so far, a three-phase system (PV, battery sets, and diesel generators) can cover the local load, and a single-phase system including 2-kW PVC and 32-kWh battery sets is operated in order to support the communication devices of the entire system. In the future, a 5-kW wind turbine will also be introduced ...
