

What is the future of solar energy?

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power (CSP), sometimes called solar thermal) -- in their current and plausible future forms.

Could solar power be a revolution?

It could lead to lower-cost, more efficient systems for powering homes, cars, boats and drones. The solar energy world is ready for a revolution. Scientists are racing to develop a new type of solar cell using materials that can convert electricity more efficiently than today's panels.

Are solar photovoltaics ready to power a sustainable future?

Nat. Energy 3,515-527 (2018). Victoria, M. et al. Solar photovoltaics is ready to power a sustainable future. Joule vol. 5 1041-1056 (Cell Press, 2021). Nemet, G. How solar energy became cheap: a model for low-carbon innovation. (Taylor & Francis, 2019). Rogers, E. Diffusion of Innovations. (Free Press, 2003). Farmer, J. D. & Lafond, F.

Could a new solar technology make solar panels more efficient?

Solar cells that combine traditional silicon with cutting-edge perovskites could push the efficiency of solar panels to new heights. Beyond Silicon, Caelux, First Solar, Hanwha Q Cells, Oxford PV, Swift Solar, Tandem PV 3 to 5 years In November 2023, a buzzy solar technology broke yet another world record for efficiency.

How has solar energy changed the world?

Solar energy started its journey in niche markets, like most innovations, supplying electricity to applications where little alternatives existed in space and remote locations 22. Since then, cumulative investments and sales, driven by past policy, have made its cost come down by almost three orders of magnitude.

Are solar energy uptake rates underestimated?

Historical projections of energy generation have consistently underestimated uptake rates of solar energy 16, 17. For example, only a year after the publication of the 2020 World Energy Outlook (WEO), the IEA's "Stated policies scenario" has been revised strongly in favour of solar energy.
