

Which energy sources are used in Mauritius?

In Mauritius, the primary energy requirements are met from a mix of imported sources (mainly petroleum products and coal) and local renewables. In 2020, 76.1% of the country's electricity was generated from non-renewable sources: coal (39.5%), fuel oil and diesel (36.6%).

How does Mauritius support the development of solar power plants?

Mauritius has encouraged the financing and development of PV power plant projects through both international competitive bidding and joint ventures between the local private sector and international companies. For example, the Henrietta solar farm that has been operational since February 2019 with a production capacity of 17.5 MW.

How can Mauritius achieve a sustainable future?

With the view to drive forward the sustainability agenda, the government has the goal of increasing renewable energy contribution to the total energy in Mauritius from 13% to 60% and phasing out the use of coal by 2030. Indeed, this is a highly ambitious but not entirely unrealistic goal.

Why are solar and wind important natural resources for Mauritius?

Indeed, both solar and wind are important natural resources for Mauritius due to its location and climatic conditions which allow for all year-round intensive sunlight and adequate wind.
