

What are Luxembourg's Energy Policy Priorities?

Since the 2014 IEA review of Luxembourg's energy policies, the country has made progress on its energy sector priorities of ensuring security of supply, promoting energy efficiency, increasing the use of renewable energy and reducing greenhouse gas (GHG) emissions.

How will Luxembourg improve its energy system?

In this context, Luxembourg plans to expand and upgrade its electricity grids, but the country would benefit further from the deployment of measures to increase energy storage and demand-side response in its power system. It is also important to ensure competitive markets that foster innovation and new energy services.

What challenges does Luxembourg face in the energy sector?

The government has adopted ambitious energy sector targets, including a 50-55% reduction of greenhouse gas emissions by 2030. Luxembourg faces challenges achieving those targets. Low energy prices for consumers are creating a barrier to the investments needed in energy efficiency and renewables.

What is Luxembourg doing about energy transition?

Luxembourg is pushing for a more aggressive approach on energy transition at the EU level and in some cases has adopted national targets that exceed the requirements of EU directives. Luxembourg's renewable energy share is growing; it reached 6.4% of gross final energy consumption in 2017.

Does Luxembourg need a new electricity infrastructure?

Luxembourg aims to cover over a third of 2030 electricity demand with renewables, mostly through variable renewable energy (VRE) from PV and wind generation. The share of VRE generation in imported electricity is also expected to increase significantly. Taken together, these factors will require substantial investment in electricity infrastructure.

How much energy does Luxembourg use?

In 2017, Luxembourg's energy consumption was 48.4 terawatt hours (TWh), in line with the 2020 energy efficiency target of not surpassing 49.3 TWh in final energy consumption. However, energy consumption has been increasing since 2016, especially in the transport sector.
