

# Mexico topstar solar

Is solar energy a good investment in Mexico?

Solar resources in Mexico are among the best in the world, with annual daily solar irradiance levels ranging between 4.4 kWh/m<sup>2</sup> and 6.3 kWh/m<sup>2</sup>. With the country's solar capacity reaching 10GW at the end of 2021, we expect solar energy to continue to present attractive opportunities for project developers and industrial consumers.

Which country has the most solar PV plants?

Although Honduras and Mexico share the same number of solar PV plants on the top 15 list, Mexico is the home to more than 52% of capacity of the top 15 projects. Looking beyond just these 15 projects, Mexico is indeed also accounting for the highest installed capacity, when compared to the Central American countries.

Does Mexico have a solar energy sector?

Mexico is also supporting its solar operations with the development of several solar energy plants that include lithium-ion battery storage facilities. However, the sector still faces some restrictions such as a lack of land for solar operations.

What is the largest solar park in Mexico?

As of June 2023, La Pimienta Solar PV Park in the state of Campeche is the largest solar park in Mexico, with a capacity of up to 444 megawatts.

Is Mexico a good place to install solar panels?

Mexico is well suited for residential rooftop solar installations, and we expect the market to grow by roughly 10% to 15% annually through 2025. With the high cost of electricity, many are being encouraged to convert their systems to solar. This can also help tackle the uncertainty of blackouts in regions that have a higher risk of power outages.

How much do solar panels cost in Mexico?

Solar panels in Mexico cost an average of \$3.07 per watt, and we expect this to decrease further as the development of solar projects becomes more commonplace. The Government of Mexico (GoM) has also helped to support the development of solar generation across the country, taking advantage of Mexico's average of 300 days of sunshine a year.

Solar potential of Mexico. Solar power in Mexico has the potential to produce vast amounts of energy. 70% of the country has an insolation of greater than 4.5 kWh/m<sup>2</sup> /day. Using 15% efficient photovoltaics, a square 25 km (16 mi) on each side in the state of Chihuahua or the Sonoran Desert (0.01% of Mexico) could supply all of Mexico's electricity. [1]
