Microgrid Case Study

What case studies support the microgrid Playbook?

SEPA explores six different case studies supporting The Microgrid Playbook: Community Resilience for Natural Disasters. Learn more in: The Microgrid Playbook: Community Resilience for Natural Disasters. Portland General Electric (PGE) Resilience and Microgrid Strategy against Earthquakes

What are the objectives of a microgrid?

Microgrids, such as the one in this case study (C1), need a clear objective, the definition of market participants, and the form of energy traded defined. Microgrids can pursue several, often conflicting objectives, such as the increase of the security of energy supplyor the integration of local renewable generation into the energy supply system.

What are the value propositions of microgrid business models?

Analysis of the case studies shows that microgrid business models are still diverse and offer numerous value propositions to hosts. California projects report value propositions of renewable energy integration, resiliency, bill and demand charge savings, and a reduction in carbon footprint.

Does the Brooklyn microgrid satisfy the 7 components?

The Brooklyn Microgrid fully satisfies three and partially fulfills an additional threeof the seven components of a decentralized microgrid energy market. The case study demonstrates that blockchains are an eligible technologyto operate such markets.

How can microgrids improve the reliability of energy supply?

Microgrids, which are a geographically limited group of multiple generation loads and energy resources, can increase the reliability of supplyas they offer the potential to provide energy in case of power outages of the superordinate grid.

Why is regulation (C7) necessary for microgrids?

Regulation (C7) is needed to legalize any market transactions and classify the microgrid market into the overall energy system. It sets the legal environment of the microgrid market which must be obeyed in any market implementations.

For example, an investigation on qualitative economic expansion [24], a financial viability study on sustainable electrification of rural Nigerian villages [25], and off-grid case ...

The efficient integration of distributed energy resources (DERs) in buildings is a challenge that can be addressed through the deployment of multienergy microgrids (MGs). In ...
