#### Are there any microgrid test networks around the world?

This paper presents a review of existing microgrid test networks around the world (North America, Europe and Asia) and some significantly different microgrid simulation networks present in the literature. Paper is focused on the test systems and available microgrid control options.

Is a microgrid test model based on a 14-busbar IEEE distribution system?

In this paper, a Microgrid (MG) test model based on the 14-busbar IEEE distribution system is proposed. This model can constitute an important research tool for the analysis of electrical grids in its transition to Smart Grids (SG).

#### What is a simulated microgrid test system?

Some simulated test systems are similar to existing microgrid test systems, but some systems have researched in different approaches. VSC based microgrid test system presents a contrasting local control approach and DC linked test system presents an approach to control the voltage at each level: at DC bus and AC bus, separately.

#### What is a hybrid micro-grid?

Except for the distributed generation units, a hybrid micro-grid is composed of controllable load and energy storage systems. An energy management system is important to optimize its performance.

What is the research work on microgrids based on?

The research works on microgrids are based on either test-beds or simulations using different microgrid topologies. There are some typical microgrid configurations also reported. In this section, it is attempted to summarize the microgrid test systems reported in the literature. 3.1. Intentional islanding and microgrid experience around the world

### What is Certs microgrid testbed?

CERTS microgrid testbed. A central communication system based on Ethernetis used to connect the Energy Management System (EMS) and the generator sets to dispatch DG set points. However, this communication network is not used in dynamic control of the microgrid. Thus, the power sources are in autonomous control with plug-and-play capability.
