

Motive energy Estonia

What type of energy is used in Estonia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Estonia: How much of the country's energy comes from nuclear power?

Why should you choose motive energy?

Increase profits. At Motive Energy, reducing energy costs and boosting profits for our customers are fundamental to our services. By implementing advanced energy solutions, from efficient solar arrays to sophisticated battery storage systems, we ensure significant savings on energy expenses, directly enhancing our clients' bottom lines.

When did Estonia stop importing Russian natural gas?

Previously heavily dependent on Russian imports for natural gas and oil products, Estonia ceased importing Russian pipeline gas in April 2022 and implemented a ban on all imports and purchases of Russian natural gas, including liquefied natural gas (LNG), in September 2022.

Does Estonia have a natural gas pipeline?

Estonia has the Balticconnector pipeline, which links Estonia with Finland. In April 2022 Estonia reduced gas imports from Russia and on 29 September 2022 Estonia banned buying natural gas from Russia.

OverviewEnergy plan and targetsEnergy securityEnergy typesElectricityTransport sectorSee alsoThe National Energy and Climate Plan published in 2019 aims to reduce greenhouse gas emissions by 70% by 2030 and by 80% by 2050. Renewable energy must be at least 42%, with a target of 16 TWh in 2030. The plan was changed in October 2022, when Estonia set a target date of 2030 to generate 100% electricity from renewables.
