

What energy system does Namibia have?

Namibia currently has a small energy system that is dominated by its 347 megawatts (MW) Ruacana hydropower plant. The country is also considering an additional hydro-power plant, the Baynes Hydro-power Project on the Kunene River.

Why does Namibia have a solar power system?

This is quite paradoxical as Namibia has one of the highest solar irradiation levels in the world, providing the possibility to generate large amounts of solar electricity at very low costs and to electrify rural areas through solar off-grid systems.

Who sells electricity in Namibia?

However, sales to end customers continue to be handled exclusively by NamPower, the REDs and municipal utilities (Hauser 2018). The current institutional landscape of the electricity sector in Namibia is, however, still structured in a rather hierarchical way.

Does Namibia have a power grid?

Most un-electrified areas in Namibia are far away from the national grid and considered to have low population densities or highly dispersed settlements. Hence, it is often neither technically nor economically viable to provide access to modern energy services using the utility grid connection (Ministry of Mines and Energy 2017a).

Will Namibia increase energy supply?

Namibia is at a crucial point in its energy system development and must make difficult decisions over the coming years to increase energy supply as demand could double in the next 20 years, while also managing costs and negative impacts.

Why is NamPower a major investment in Namibia's electricity network?

"NamPower welcomes the financing approval of the project, as this is one of the major strategic and crucial investments towards Namibia's electricity transmission network. NamPower will be able to maintain pace with evolving and increasing electricity needs of the country.

THREE young entrepreneurs have formed a company called ePower Namibia, and say they want to help the government in implementing goals contained in the Harambee Prosperity Plan, Vision 2030 and the ...

Today marks the approval of Namibia's first ever World Bank financed energy project, aimed at improving the reliability of the country's transmission network and enabling increased integration of renewable energy ...
