

National Standards for Civilian Energy Storage Systems

What are the different types of energy storage standards?

More generic standards tend to focus on risks common to different storage types (e.g. electric shock) as well as specific risks for mature technologies. These standards include the IET code of practice for electrical energy storage systems and the recently released IEC-62933-5-2 which is specific to electrochemical storage systems.

How will grid scale electricity storage improve health and safety standards?

The deployment of grid scale electricity storage is expected to increase. This guidance aims to improve the navigability of existing health and safety standards and provide a clearer understanding of relevant standards that the industry for grid scale electrical energy storage systems can apply to its own process (es).

Are energy storage codes & standards needed?

Discussions with industry professionals indicate a significant need for standards..." [1,p. 30]. Under this strategic driver, a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes & Standards (C&S) gaps.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

Is there a consensus on energy storage standards?

It can be difficult to reach consensus for standards creation in industry sectors which are rapidly developing, as is the case with some energy storage technologies, as knowledge and best practice are not yet established.

What are the safety requirements for electrical energy storage systems?

Electrical energy storage (EES) systems - Part 5-3. Safety requirements for electrochemical based EES systems considering initially non-anticipated modifications, partial replacement, changing application, relocation and loading reused battery.
