Nauru Utilities Corporation's generating facilities comprise a Power Station dating back to the early 1950's with medium speed diesel generators ranging in age from 10 to 37 years old. Table 1 below provides information on the generators.

What is Nauru Utilities Corporation Act?

Whilst the Nauru Utilities Corporation Act sets up the aims and responsibilities of the Corporation, there are presently no subsidiary legislations/regulations to guide the operations of the Utility. These subsidiary legislations/regulations define the powers of the Corporation in terms of running its daily operations.

Does Nauru have a functioning sewage system?

Although the government has been digging wells for community use in each district as part of their National Sustainable Development Strategy, there is little water quality control or surveillance. All bottled water is imported. The Nauru Rehabilitation Corporation is responsible for Nauru's sewage system. As such, the existence and effectiveness of the sewage system is not explicitly stated in the passage.

The system will be fully integrated and automated with the existing diesel generation (17.9 MW installed capacity currently manually operated) to optimize solar energy use, to enable optimal BESS charging/discharging and to provide optimal shut off of the diesel engines. This will reduce Nauru's over reliance on diesel for power generation.

Japan entered the OTEC scene with the Tokyo Electric Power Company building a closed-cycle plant on the island of Nauru in 1981, being the first to send OTEC power (30 kW) to the public grid. By 1998 the price of oil bottomed at \$10/barrel, and OTEC lost its incentive as an economical energy resource.
