Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km² and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

What can New Brunswick achieve through the energy transition strategy?

We identify the opportunities and benefits to New Brunswick that can be realized through the energy transition strategy. SMRs: Double our carbon-free nuclear baseload generation by adding 600 MW of Small Modular Reactors at Point Lepreau Nuclear Generation Station by 2035.

This map shows renewable energy installations throughout the province of New Brunswick. For more information on renewable energy in New Brunswick, head to our main website, renewablesnb.ca. Renewables NB is coordinated by EOS Eco-Energy. EOS is an environmental charity based out of Sackville, NB.

Electricity from renewable energy in New Brunswick is increasing significantly. Government is committed to increasing the amount of electricity from new renewable sources in New Brunswick to 40% by 2020. Currently, over 40 per cent of the electricity consumed in the province comes from renewables in the forms of hydro-electric, wind energy, and ...
