

Is Gambia ready for a new era of renewables?

Gambia: strong international support for a new era of renewables with inauguration of historic 23 MWp solar plant A significant strategic project with strong substantial economic and social impacts, the recently inaugurated solar photovoltaic plant in Jambur is poised to supply electricity to approximately 18,500 households.

Will re be a part of the Gambia's energy future?

The Gambia has already started this process by setting up a strong policy that includes Re as part of its energy future. it is in the process of building the institutional and legal framework that will help to deliver this promise.

Is re a solution to energy problems in the Gambia?

Policy makers across africa have been among the last to embrace Re as a solu-tion to their energy problems. They are often locked into crisis management on a day-to-day basis. The country's policy makers need to be persuaded that Re has a real future in the energy mix of The Gambia. They need to demonstrate this by their actions.

Can communities benefit from renewable electricity support in the Gambia?

Communities who do not have access to the electricity network are one of the main groups with potential to bene-fit from renewable electricity support. however, community investment in the Gambia presents serious challenges. it is difficult for communities to access finance and develop the skills and knowledge required.

Why is NAWEC launching a solar plant in the Gambia?

This marks the first time in the Gambia's history where a utility scale solar plant of 23 Megawatts Solar PV capacity and 8-Megawatt hours battery storage is being commissioned. This solar plant allows NAWEC to finally shift away from expensive heavy fuel oil-based generation which is costly and harmful to the environment.

Are there re technology standards in the Gambia?

There are currently no Re technology standards in The Gambia. however, the draft FiT and PPa mention general applicable codes and standards that the Re plant should comply with. it would be worth creating specific standards and codes for Re technologies to ensure adequate quality, design, safety, operation and maintenance of equipment.

Hydropower has been the main renewable energy resource to date, but declining costs for solar photovoltaics (90% decline since 2009) and wind turbines (55%-60% decline since 2010) mean solar and ...
