What will totalenergies do in New Caledonia?

Noumea, December 20,2021 - Total Energies will develop a series of photovoltaic and energy storage projects in New Caledonia in order to deliver decarbonized electricity via a 25-year renewable power purchase agreement (PPA) for the industrial operations of mining and metallurgy consortium Prony Resources New Caledonia.

What is New Caledonia Energy?

New Caledonia Energy is the entity responsible for developing the project for the new power station that will supply the energy for Société Le Nickel (SLN). The current power station is nearly 50 years old and is highly polluting. The ultimate goal is to have a carbon-neutral plant by 2030,which would be a world first in the mining sector.

How does Prony resources contribute to New Caledonia's development?

A participant in the global energy transition, Prony Resources sustainably contributes to New Caledonia's development by processing its nickel and cobalt resourcesin accordance with the highest industrial and environmental standards.

Total Quadran, French energy company Total"s renewables subsidiary has completed the Helio Bououparis 2 solar farm on New Caledonia and ENGIE EPS, formerly Electro Power Systems, the energy ...

TotalEnergies (TTE) is set to enhance its renewable energy footprint in New Caledonia by developing photovoltaic and energy storage projects in collaboration with Prony Resources New Caledonia. This strategic initiative includes a 25-year renewable power purchase agreement, aiming for a total installed capacity of 160 MW and 340 MWh of battery storage by ...

Many projects are underway, with a particularly dynamic photovoltaic sector notably with the recent inauguration by Total of the largest solar park with storage in France with 58,000 solar panels and a total capacity of 30 megawatts, it will feed in electricity to 40.000 Caledonians.. At the same time, New Caledonia is continuing to catch up on waste management and sanitation.

The company has a stake of 100%. Enercal Poya Solar PV Park is a ground-mounted solar project which is planned over 142,790 square meters. The project is expected to generate 48,600MWh electricity to offset 35,808t of carbon dioxide emissions (CO2) a year. The solar power project consists of 57,690 modules. Development status
