Energy in New Zealand 2024 8 Figure 3. Energy intensity by sector SELF-SUFFICIENCY REMAINED UNCHANGED New Zealand relies on a combination of domestically produced and imported fuels to meet its energy needs. A common metric used internationally to measure this is a self-sufficiency indicator, which shows how well we can meet our own energy supply

New Zealand's energy system has served us well to date and our long-term energy outlook is positive. However, new challenges are emerging as our energy system undergoes fundamental change. For example, demand for electricity is expected to increase significantly by 2050 and meeting this demand will require a huge increase in investment in ...

The two components combined to form an industry-leading solution that can leverage Australia's renewable energy potential. With the world's highest household solar installation rates, state governments' investment in renewable projects and the nation's 2050 net-zero target, this technology is likely to see large-scale uptake and drive the adoption of sustainable energy ...

About 40% of New Zealand's total greenhouse gas emissions come from our energy use. The choices we make about how we use energy in our everyday lives and businesses have an impact. Our opportunity is to build out a strong and stable energy system by prioritising energy efficiency, energy conservation and the use of renewable energy sources.
