New Zealand: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO<sub>2</sub> - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Where our energy comes from. Around 60% of New Zealand's energy is supplied by fossil fuels. Once energy losses and distribution are taken into account, fossil fuels make up about 70% of our total final consumption. This includes petrol and diesel for vehicles, coal and gas for industrial boilers and household gas and LPG.
