

What are the environmental health risks in Nicaragua?

In this particular paper, we present you the findings of a study looking at three fundamental environmental health risks in Nicaragua, notably inadequate water and sanitation, indoor and outdoor air pollution.

Does Nicaragua have a water management system?

In Nicaragua specific institutions for the management of water resources have recently been working in cooperation in the context of the Sustainable Development Goals especially SDG 6 ensuring Water and Sanitation for all.

Is resource management a key factor in national development in Nicaragua?

Although in Nicaragua there exists a richness in natural resources especially water, the process of resource management has not been considered as a main factor in national development. This has been limited by failure to promote better management and prioritizing the necessary economic resources to secure a sustainable management.

Why is Nicaragua a developing country?

Nicaragua is immersed in similar environmental problematic and climate change vulnerability as observed in the global context but as a developing country it also has deep educational, economic, institutional, political, and social factors which impede progress in achieving a sustainable development path.

What type of land ecosystem does Nicaragua have?

Nicaragua has a large variety of tropical land ecosystems such as tropical dry forests mainly in the Pacific and Central territories and tropical humid forests in the Caribbean.

What is a priority action in Nicaragua?

The aim is to promote priority actions in response to the needed integral management of water resources in Nicaragua supporting a sustainable development and protection of national natural resources, specifically related to the environmental necessities of Nicaragua.

In developing nations, such as Nicaragua, water security issues affect a large portion of the population. A lack of clean and secure water negatively causes many public health, environmental and economic concerns. This project addresses the need to develop a water distribution system to a rural community in Nicaragua.
