This part of the IEC 61427 series gives general information relating to the requirements for the secondary batteries used in photovoltaic energy systems (PVES) and to the typical methods of test used for the verification of battery performances. This part deals with cells and batteries used in photovoltaic off-grid applications.

The IEC standard has two parts: one for on-grid systems and one for off-grid systems. IEC 61427-1 standardizes electrical tests of off-grid photovoltaic energy systems to help ensure a long battery life for continued availability. These tests include:
