

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Why is maintenance management important for PV power plants?

Therefore, maintenance management is essential for reliable and effective operation of PV power plants, ensuring uninterrupted system operation and minimizing downtime. Compared to well-established technologies such as hydro, thermal, and wind, the O&M processes for PV systems are not yet fully structured in many operating companies.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

How can photovoltaic systems and solar energy installations be sustainable?

One important component for establishing sustainable models for the usage of photovoltaic systems and solar energy installations exists in Operation and Maintenance (O&M). Continuous functioning, lowering of leveled cost of electricity (LCOE) and reduction of electronic waste are ensured by frequent O&M of all energy producing installations.

What is a good corrective maintenance plan for PV power plants?

One important aspect of a good corrective maintenance plan for PV power plants is ensuring that spare parts are available and accessible when needed to avoid prolonged plant down-time/outage due to equipment malfunctioning or damage.

How competitive is PV plant operation & maintenance?

The world of PV plant operation and maintenance (O&M) is increasingly competitive, reflected clearly by a significant drop in the O&M service fee over the last decade; e.g. Bloomberg New Energy Finance has reported a drop of 73% of average full-scope O&M price in Europe between 2011 and 2017.
