

What happens if you touch an RS485 inverter?

Touching electronic components can cause damage to or destroy the inverter or the product through electrostatic discharge. o Ground yourself before touching any component. The SMA RS485 Module enables SMA inverters to establish wired RS485 communication. The type label clearly identifies the product.

Which SMA inverters are compatible with the RS485 module?

The RS485 Module must only be installed in the following SMA inverters: o STP 50-40(Sunny Tripower CORE1) The inverter still complies with the standard after the product has been installed. The product must only be used in countries for which it is approved or released by SMA Solar Technology AG and the grid operator.

What is SMA RS485 module?

The SMA RS485 Module enables SMA inverters to establish wired RS485 communication. The RS485 Module must only be installed in the following SMA inverters: o STP 50-40 (Sunny Tripower CORE1) The inverter still complies with the standard after the product has been installed.

How do you connect a RS485 inverter to a circuit breaker?

Turn off the circuit breaker. Turn off the disconnect/auxiliary power switch. Turn on the disconnect/auxiliary power switch. Turn on the circuit breaker. Connect the system components as shown in the diagram below. If no Energy Meter is connected, terminate the inverter's RS485 bus by switching the left DIP switch ON.

How many RS485 inverters can be connected in parallel?

Note that Meter connects to A2/B2 (pins 1 &3)in the master,and the master communicates with the slaves on A1/B1 (pins 5 &7). If connecting two RS485 cables in parallel,please use the provided Bootlace terminators. The maximum number of 3-Phase Hybrid inverters that can be connected inn parallel is 5(five) - One Master,and up to Four slaves.

What is RS485 wiring in Sungrow SH\*\*RS and s sh\*\*RT inverters?

The purpose of the RS485 wiring in Sungrow SH\*\*RS and SH\*\*RT inverters is to allow multiple inverters to be controlled from one energy meter. As the single and 3-phase configurations are different,we will deal with each separately. The connection is done via the RS485 cable,and runs from meter to master,then to slave(s).
