Do you have problems with your solar panels?

Nearly seven in 10 owners had had no problems with their solar panels in our survey of over 2,000 owners.* The most common - and most serious - problem owners face is with the inverter. In some cases inverter problems mean you don't get any usable renewable electricity. It can also be a pricey problem to fix.

Why is solar intermittency a problem?

Solar intermittency is the most obvious issue related to PV panel efficiency. The sun is not visible for 24 hours per day except for a short time each year at extreme latitudes. Solar power users need other power sources to use after sunset, and utilities cannot rely on solar alone to provide electricity for their customers.

How do I know if my solar inverter is failing?

Also check your inverter for any fault codes or error messages. Check the real-time and cumulative generation on your inverter (most have these options) to make sure that the solar panels are still generating electricity. If the system is generating at the inverter this implies a failed generation meter.

Can you mix and match solar panels in a string?

You can mix and match solar panels in an array, especially when you don't have enough of one brand. However, most people prefer using the same brand and type for optimal performance. You can mix and match monocrystalline solar panels with polycrystalline solar panels. Can you mix and match solar panels in a string?

Are bifacial solar panels better than one-sided solar panels?

Another solution is bifacial solar panels, which have cells on their underside to catch light reflected off the ground, roof, or other reflective surfaces. If combined with sun-tracking panels that adjust to maximize solar contact throughout the day, bifacial panels are 30-40% more efficient than their one-sided counterparts.

Do solar panels produce less power?

Less-than-perfect weather conditions are a fact of solar pv life and there's nothing you can do about it. Solar panels also degrade gradually over time. So, after a decade of ownership, your panels might produce slightly less power than they did when new.
