How much will solar power cost in 2030?

In 2016, the U.S. Department of Energy's Solar Energy Technologies Office set a goal to reduce the unsubsidized levelized cost of electricity (LCOE) of utility-scale photovoltaics (PV) to 3 cents/kWh by 2030. Utility PV systems were benchmarked to have an LCOE of approximately 5 cents/kWh in 2020 (Feldman, Ramasamy et al. 2021).

How much LCOE does a solar PV system have?

Utility PV systems were benchmarked to have an LCOE of approximately 5 cents/kWh in 2020 (Feldman, Ramasamy et al. 2021). To achieve the 2030 SunShot goal, the lifetime economics of PV systems must be improved across multiple dimensions.

Why are PV module prices falling?

Photovoltaic (PV) module prices are a key metric for PV project development and growth of the PV industry. The general trend of global PV module pricing has been a rapid and steep decline-- an order of magnitude over the past 10 years (Mints April 2019)--enabled by economies of scale as well as manufacturing and technology improvements.

Over the past decades, two key factors have driven this revolution: the dramatic decrease in solar panel cost and the significant increase in solar panel efficiency. These trends have made solar energy increasingly ...

Both are measured on logarithmic scales, and the trend follows a straight line. That means the fall in cost has been exponential. Costs have fallen by around 20% every time the global cumulative capacity doubles. Over
