What are mounting brackets & rails for solar panels?

Mounting Brackets are the primary components that attach the solar panels to the mounting surface. They come in various types depending on the mounting surface (roof, ground, pole, etc.). Rails: Rails are long, horizontal structures attached to the solar panels using clamps. They provide a stable base for the solar panels.

What is a solar panel bracket?

Solar panel brackets serve multiple functions in a solar energy system. Primarily, they provide a secure attachment point for solar panels to various mounting surfaces, such as roofs or the ground. Additionally, brackets help maintain the correct tilt angle and orientation of solar panels to maximize sunlight exposure and energy generation.

What are freestanding solar panel mounting brackets?

Freestanding ballasted solar panel mounting brackets are designed to be installed on the ground or on a flat surface. These brackets are usually made of steel or aluminum and are designed to be rust-resistant and weather-resistant. They are installed using a ballast system, which uses weights to secure the brackets in place.
