

Photovoltaic panels need to be inspected before installation

Do I need an inspection before installing solar panels?

An inspection before installation is necessary to ensure that your property's electrical system can handle the addition of solar. If you're installing a rooftop solar panel system, an engineer will also need to inspect your roof's structure to make sure it can withstand the additional weight of the solar panels and racking equipment.

What is a solar panel inspection?

The solar inspection process is one of the most time-consuming parts of any company's operations, from design to installation. PV Education 101: A Guide for Solar Installation Professionals shows how to frame solar panel inspection when speaking to your customers about development costs and installation timelines.

What is a solar panel inspection checklist?

This checklist covers the key items that inspectors typically evaluate. Use it to prepare for your inspection and increase your chances of passing on the first attempt. By systematically going through this checklist, you can ensure that your solar panel system meets the necessary requirements for inspection.

Who conducts a solar panel inspection?

Typically, solar panel inspections are conducted by:

- Local government officials: Usually from the building or electrical department.
- Utility company representatives: To ensure proper grid connection and metering.
- Third-party inspectors: Sometimes hired by local authorities or solar companies for additional expertise.

3. When Inspections Occur

What is included in a solar inspection?

There are some published examples of what is included in a solar inspection such as SolarAPP+ and California's solar permitting guidebook. During an onsite solar inspection, systems are evaluated for installation quality, equipment compatibility and compliance to building codes, and ensuring the system was installed as it was permitted.

How do I prepare for a solar inspection?

The inspection process is a long, but important part of helping your customers go solar. At both the application and construction review stages of your projects, the best way to prepare for any solar inspection is with the knowledge and tools to efficiently design and install systems up to local safety standards.
