

Are photovoltaic power generation policies effective?

Existing qualitative research on photovoltaic power generation policies has preferred sorting, summarizing, and performing comparative analyses of policies, focusing on their effectiveness and efficiency. Meanwhile, policy synergies have been ignored when studying the effectiveness of photovoltaic power generation policies.

Are China's policies on photovoltaic power generation consistent?

The results show that changes in the degree of synergy between policy goals and measures tend to be consistent and that China's policies on photovoltaic power generation have gradually shifted to the combined use of different policy measures.

What are the policy goals of photovoltaic power generation?

The policy goals of photovoltaic power generation are divided into three aspects: improving technology and promoting production, promoting construction and application, and guaranteeing and maintaining application effects.

Who formulates policies on photovoltaic power generation?

Nevertheless, policies on photovoltaic power generation have been mainly formulated by a single department: the National Development and Reform Commission or the National Energy Administration. In addition, as shown in Fig. 1, before 2009, there were no multiple departments formulating or issuing policies without synergy between departments.

What is the policy strength of the photovoltaic industry?

The policy strength of the photovoltaic industry includes national-level policy strength and regional policy strength. The regional policy strength will be given the weight on the proportion of the regional PV installed capacity in the China's PV installed capacity. The regression results are shown in Table 3, Table 4, Table 5 and Table 6. Table 3.

Are photovoltaic power generation policy Synergy based on text mining?

A quantitative analysis of policy synergy based on text mining We quantitatively examine photovoltaic power generation policy synergies in China. This study expands the existing quantitative research on policy content analysis. China employs strong administrative power approaches, such as macro planning.

Photovoltaic (PV) technologies dominate China's solar industry, with roughly 99% of China's solar power capacity. Chinese PV manufacturing accounts for the vast majority of global PV production. In 2020, China accounted for 76% of global ...

The distributed photovoltaic power generation is an important way to make use of solar energy in cities. China issues a series of policies to support the development of distributed photovoltaics ...

Downloadable (with restrictions)! To achieve carbon neutrality by 2060, the Chinese government needs to establish effective policies for promoting renewable energy. However, there is a lack ...

In recent years, a series of distributed photovoltaic support policies are approved in China to promote the development of the distributed photovoltaic power generation. It is difficult to ...

This study designed an evaluation framework for China's PV industry policy from four dimensions (policy measure, policy type, policy strength, and policy issuing department) to categorize and ...

This study designed an evaluation framework for China's PV industry policy from four dimensions (policy measure, policy type, policy strength, and policy issuing department) to categorize and quantify China's 307 PV industry policies from ...

Download Citation | On Oct 1, 2023, Zhaotian Chong and others published Is the photovoltaic power generation policy effective in China? A quantitative analysis of policy synergy based on ...

For the generation of electricity in far flung area at reasonable price, sizing of the power supply system plays an important role. Photovoltaic systems and some other renewable ...

Research on the policy route of China's distributed photovoltaic power generation Energy Reports Provided in Cooperation with: Elsevier Suggested Citation: Li, Hanfang et al. (2020) : Research ...

The distributed photovoltaic power generation is an important way to make use of solar energy in cities. China issues a series of policies to support the development of ...

Focusing on the photovoltaic power generation policies in China, this study quantitatively examines the degree of synergy of the policies in terms of promulgating departments, goals, ...

To achieve the goals of carbon peak and carbon neutrality, Xinjiang, as an autonomous region in China with large energy reserves, should adjust its energy development and vigorously develop new energy sources, ...
