Why is the integrated photovoltaic-energy storage-charging station underdeveloped?

The coupled photovoltaic-energy storage-charging station (PV-ES-CS) is an important approach of promoting the transition from fossil energy consumption to low-carbon energy use. However, the integrated charging station is underdeveloped. One of the key reasons for this is that there lacks the evaluation of its economic and environmental benefits.

Who are the 11 references for solar photovoltaics with energy storage?

11 References Ardani, Kristen, Eric O'Shaughnessy, Ran Fu, Chris McClurg, Joshua Huneycutt, and Robert Margolis. 2017. Installed Cost Benchmark and Deployment Barriers for Residential Solar Photovoltaics with Energy Storage: Q1 2016

How much money does Shan et al invest in a power station?

Shan et al. invested about 1.8 million yuan to transform a service area into an integrated power station; in their design plan, the charging equipment is charged 10 times daily at 20 kWh per charge. Given that the profit is 0.8 yuan/kWh and about 58,400 yuan/year, it is expected to pay back in 4.5 years. Table 1.
