What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

Who should perform PV system servicing?

- o Only qualified personnel who meet all local and governmental code requirements for licensing and training for the installation of electrical power systems with alternating current (ac) and dc voltages up to 1,000 V (or 600 V, when applicable) should perform PV system servicing.

Should a PV system be integrated to a building?

PV system should be applied seamlessly, and it should be naturally integrated to the building. Natural integration refers to the way that the PV system forms a logical part of the building and how, without a PV system, something will appear to be missing. Generally, the PV modules can be purchased and mounted with a frame or as unframed laminates.

How do asset owners manage a fleet of PV systems?

The asset owner or asset manager should allocate sufficient internal resources and secure any required external resources to implement the O&M plan. Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s).

What are the best practices for end-of-life PV waste management?

Current best practices are to minimize hazardous materials and/or design for recyclability and control of such materials (IRENA 2016). Such foresight in recyclability and management of substances may affect the eventual cost and benefits of end-of-life PV waste management.
