

Can PV inverters handle higher voltage levels?

By feeding power into the medium-voltage grid, the "MS-LeiKra" project team has demonstrated that PV inverters are technically capable of handling higher voltage levels. The benefits for photovoltaics include enormous cost and resource savings for passive components and cables.

What is a SMA medium voltage power station?

The SMA Medium Voltage Power Station combines the highest plant safety with maximum energy yield and minimized logistical and operating risk for large scale PV power plant projects. The SMA Medium Voltage Power Station is the most compact combination of a central inverter, transformer and switchgear.

What is a medium voltage power station (MVPs)?

At a voltage of 1500 V DC it allows for significantly higher efficiency in system design. With a variety of options and the new DC-coupling readiness it provides maximum flexibility at minimum size. The SMA Medium Voltage Power Station (MVPS) offers the highest power density in a plug & play design, which is suitable for global use.

How many copper cables do you need for a photovoltaic power plant?

An average photovoltaic power plant requires dozens of kilometers of copper cables. Increasing the voltage generates significant savings potential: At today's possible output voltage of 800 V AC, a 250 kVA string inverter requires cables with a minimum cross section of 120 mm<sup>2</sup>.

Which inverter is best for a medium voltage power station?

The Sunny Central UP is our most powerful inverter with up to 4600 kVA and is the heart of the Medium Voltage Power Station. At a voltage of 1500 V DC it allows for significantly higher efficiency in system design. With a variety of options and the new DC-coupling readiness it provides maximum flexibility at minimum size.

What is a high voltage PV string inverter?

Higher voltage reduces the cable cross section. The inverter developed by Fraunhofer ISE enables the transition of PV from low voltage to medium voltage. Modern PV string inverters have an output voltage of between 400 V AC and 800 V AC. Although the output of power plants is steadily growing, voltage has not yet been increased.

Photovoltaic (PV) technology is rapidly developing for grid-tied applications around the globe. However, the high level PV integration in the distribution networks is tailed ...

Germany's Fraunhofer Institute for Solar Energy Systems (ISE) has developed a 250-kW silicon-carbide (SiC)

inverter that can be used in utility-scale PV projects connected to a medium-voltage grid.
