Latvia's 330 kV power network represents the middle point of the energy system of the Baltic states between its northern and southern parts. All 330 kV substations, except for "Daugavpils", have a dual power supply. The 110 kV network has a circle scheme. The majority of the 110 kV substations have two transformers and a dual power supply.

GAMA Power Systems Engineering and Contracting, Inc. GAMA Power Systems is an affiliate of GAMA Holding which specializes in EPC Projects (Engineering, Procurement, and Construction). Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources. The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into ...
