Who is developing Burkina Faso's solar power plants?

The solar plants are being developed by BioTherm Energy, a Power Africa partner. SONABEL, Burkina Faso's national electricity company, uses thermal (heavy fuel oil) and hydropower to cover an estimated 60% of the country's current electricity capacity. The rest is imported from Côte d'Ivoire and Ghana, as part of the West African Power Pool (WAPP).

Is Burkina Faso importing energy from Côte d'Ivoire?

Energy needs in Burkina Faso are growing at a 13% annualized rate, and the country is currently importing energy from Côte d'Ivoire. The plant was built by Cegelec, and funded by donations from the European Union and France's development agency, permitting \$0.084 per kilowatt-hour, which is considerably cheaper than thermal production.

How much does electricity cost in Burkina Faso?

Burkina Faso currently has some of the most expensive electricity in the region, with cost of production at \$0.22-0.25 USD/kWh. The Government of Burkina Faso (GOBF) has set forth a bold national plan and has taken steps to introduce legislation to encourage private-sector investment and to liberalize electricity generation and distribution.

Does Burkina Faso have a private sector plan?

The country has had limited experience with private sector development in the energy sector, but the Government of Burkina Faso has set forth a bold national plan and has taken steps to introduce legislation to encourage private-sector investment and to liberalize electricity generation and distribution.

Why is MCC developing a second compact in Burkina Faso?

MCC is currently developing its second Compact in Burkina Faso. MCC's constraints analysis revealed that some of the main barriers to economic growth in the country include an insufficient supply of power and the high cost of electricity.

Le 21 mai, l'entreprise AMEA Power a annoncé une avancée majeure au Burkina Faso avec la mise sous tension de sa centrale solaire de 26,6 MW. Située dans le village de Zina, dans la province du Mouhoun, cette centrale fournira de l'électricité à plus de 43 000 personnes, tout en réduisant de 13 200 tonnes les émissions de CO2 par an.
