

What percentage of Estonia's energy supply is renewable?

According to the International Renewable Energy Agency (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavily dominated by bioenergy, which represented 93% of renewables.

How much electricity does Estonia use a year?

Estonia's all-time peak consumption is 1591 MW (in 2021). It was agreed in 2018 that Estonia, Latvia and Lithuania will connect to the European Union's electricity system and desynchronize from the Russian BRELL power system, this is expected to be completed by February 2025.

How will a construction project affect Estonia's economy?

The project of this magnitude will constitute significant GDP increase and create a large number of construction jobs during development and long term sustainable operations jobs in Estonia.

Does Estonia have a natural gas pipeline?

Estonia has the Balticconnector pipeline, which links Estonia with Finland. In April 2022 Estonia reduced gas imports from Russia and on 29 September 2022 Estonia banned buying natural gas from Russia.

Does Estonia still use fossil fuels?

Energy in Estonia has heavily depended on fossil fuels. Finland and Estonia are two of the last countries in the world still burning peat. Estonia has set a target of 100% of electricity production from renewable sources by 2030 and climate neutrality by 2050.

When did Estonia stop importing Russian natural gas?

Previously heavily dependent on Russian imports for natural gas and oil products, Estonia ceased importing Russian pipeline gas in April 2022 and implemented a ban on all imports and purchases of Russian natural gas, including liquefied natural gas (LNG), in September 2022.

Having the capabilities to provide a wide range of services on Heavy Duty Turbines our experts have in-depth experience on turbines such as GE Frame series as well as Siemens E, F and H-class turbines and Ansaldo GT and AE series turbines.

The EN 50600 certified facility in Tallinn is the most energy-efficient and secure data center in the Baltics. With multiple levels of security keeping your assets safe, duplicated systems offering high reliability and electricity from renewable energy sources keeping the ecological footprint low, it is the best place to store your mission critical data.

Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product. It effectively measures how efficiently a country uses energy to produce a given amount of economic output. A lower energy intensity means it needs less energy per unit of GDP.
