

Abstract: Iran has high potentials for integrating renewable energy resources into its future power generation portfolio. This paper presents an analytical study on the potential of the wind and ...

Nowadays, renewable energy sources (RES), which are known as alternative energy sources, are a popular field of research considering the environmental concerns and reduction of fossil fuels [1] should be noted that the energy produced by RES increases or decreases depending on geographical conditions, such as wind and solar energy [2] fact, ...

With the introduction of smart energy grids and extensive penetration of renewable energy resources in distribution networks, Micro-Grids (MGs), which are comprised of various alternative energy resources and Advanced Metering Infrastructure (AMI) systems for better implementation of DR programs, are effectively employed.

The energy grid is where these crises meet, and the creation of a smart grid is vital in delivering energy resources in the face of supply disruptions while optimizing usage for a healthier planet. However, converting our current energy grid structures to this new model is a complex endeavor, requiring a systemic way of thinking and an open ...

Shezan et al. [14] conducted a techno-economic analysis of a smart grid-integrated hybrid renewable energy system for Brisbane City, Australia. The simulation and optimization of the whole hybrid energy system were performed by HOMER. They integrated a combined energy system including solar cell-HAWT-diesel-battery to a smart grid.

She is pursuing her Ph.D. research involving renewable energy and power engineering from the School of Electronics Engineering at VIT-AP University, India. Her current research includes power system economics, renewable energy integration, congestion management, smart grid, electricity market, energy management, and machine learning.

2.1 Simplified Approach to Mathematical Modeling of Electrical Grid Stability with Renewable Energy Integration. A key aspect of electrical grid stability is the balance between generated power and consumed power [].If these two values are not in balance, the grid's voltage and frequency can fluctuate, which can lead to instability [].To model this balance, we can use ...

Smart Grid and Renewable Energy (SGRE) Journal Information SUBSCRIPTIONS The Smart Grid and Renewable Energy (Online at Scientific Research Publishing,) is published quarterly by Scientific Research Publishing, Inc., ...

2 ???· The project is the second grid connected Eco Wave Power plant and the only wave power plant anywhere in Middle East, operating under the terms of a power purchase agreement entered with IEC, as part of the project's recognition as a "Pioneering Technology" by the Chief Scientist of the Energy Ministry, Government of Israel.

This makes the power grid a smart grid because there is an energy flow and a data flow, leading to efficient energy distribution throughout the grid [8]. ... in a case study with real-world data according to energy prices and the average amount of solar radiation and wind in Iran. The data was collected from solar GIS maps and Wind Measurement ...

The proposed mathematical model is simulated according to real-world data from Iran, and a comparison is made between a model with the possibility of trading energy in a peer-to-peer grid and a model without this possibility; it turns out that the use of peer-to-peer trade can enable significant profits and benefits for peers, and central ...

2.1 Alternative energy resources at the ports. Renewable energy resources have become the main priority of countries to reduce dependency on conventional energy resources . Ports, as an energy-consuming sector, are seeking alternative sources of energy. Various approaches have been proposed to develop an alternative energy source in ports.

tems must include a smart grid and microgrid (MG). Herein, the potential for ... RE percentages, whereas Saudi Arabia, Iran, Iraq, Kuwait, and Qatar have the lowest. The significance of building a complete ... renewable energy resources (RERs) represent a chal-lenge to the stability and operation of MGs, since their output ...

The first section is develops the Iran smart grid roadmap project, which is one of the subprojects of the Iran Smart Grid National Grand Project. The roadmap focuses on technology development. ... Global warming is an increasing motivation to integrate renewable energy resources in water systems for different purposes like water pumping, water ...

Amirhossein Ahmadian received his B.S. degree from the Sharif University of Technology, Tehran, Iran, in 2015, in Mechanical Engineering. ... specifically renewable energy and vehicle-grid integration solutions. ... She is currently a Ph.D. student in SMERC with research interests in Electric Vehicle Smart Charging, Vehicle to Grid Technologies ...
