In conventional energy systems, stakeholders who engage in governing the system are a small group of elite technicians and government officials, such that there is a pervading perception that energy systems are separated from people's lives and consist of complex technologies beyond their comprehension [9], [11], [12]. This type of elite ...

Biomass is by far the most important primary energy source in Nepal. Biomass comprises wood, agricultural residues and dung. One major problem with this is that burning these biomass substances for cooking is a common practice (87.3%) and thus exposes those living in the house to harmful air pollutants. [7] Those who cook and live a substantial amount of time in the ...
